

POWERFULL, SIMPLE
THE COMPLETE TOUR VERIFICATION SYSTEM

Guard On-Line:

Guard On-Line is high performance application software that includes all PROGuard functionality and several other advanced functions, like real time monitoring. But even more than application software, Guard On-Line is a system, as it is composed of a number of programs integrated. Besides being extreme powerful, Guard On-Line is simple to use. Its interface is intuitive; you will not need to attend a training program to use Guard On-Line.

Guard On-Line is offered in three versions and two sub-versions, one of them will perfectly fit your needs.

Guard On-Line Versions

1. Desktop
2. Enterprise
3. WEB

Guard On-Line Sub-Versions

1. Professional (PRO)
2. Light

Guard On-Line Desktop:

The Desktop version runs under Windows® 7 or XP, on standard computers or workstations - Guard On-Line Desktop is not recommended to be run on servers. Beyond all functionalities already found in PROGuard, Guard On-Line Desktop comes with a database manager built-in, so it easily consolidates information collected by several wands. Guard On-Line Desktop can be installed in more than one computer or workstation at the same time, but it is not recommended that different instances of Guard On-Line Desktop share the same database.

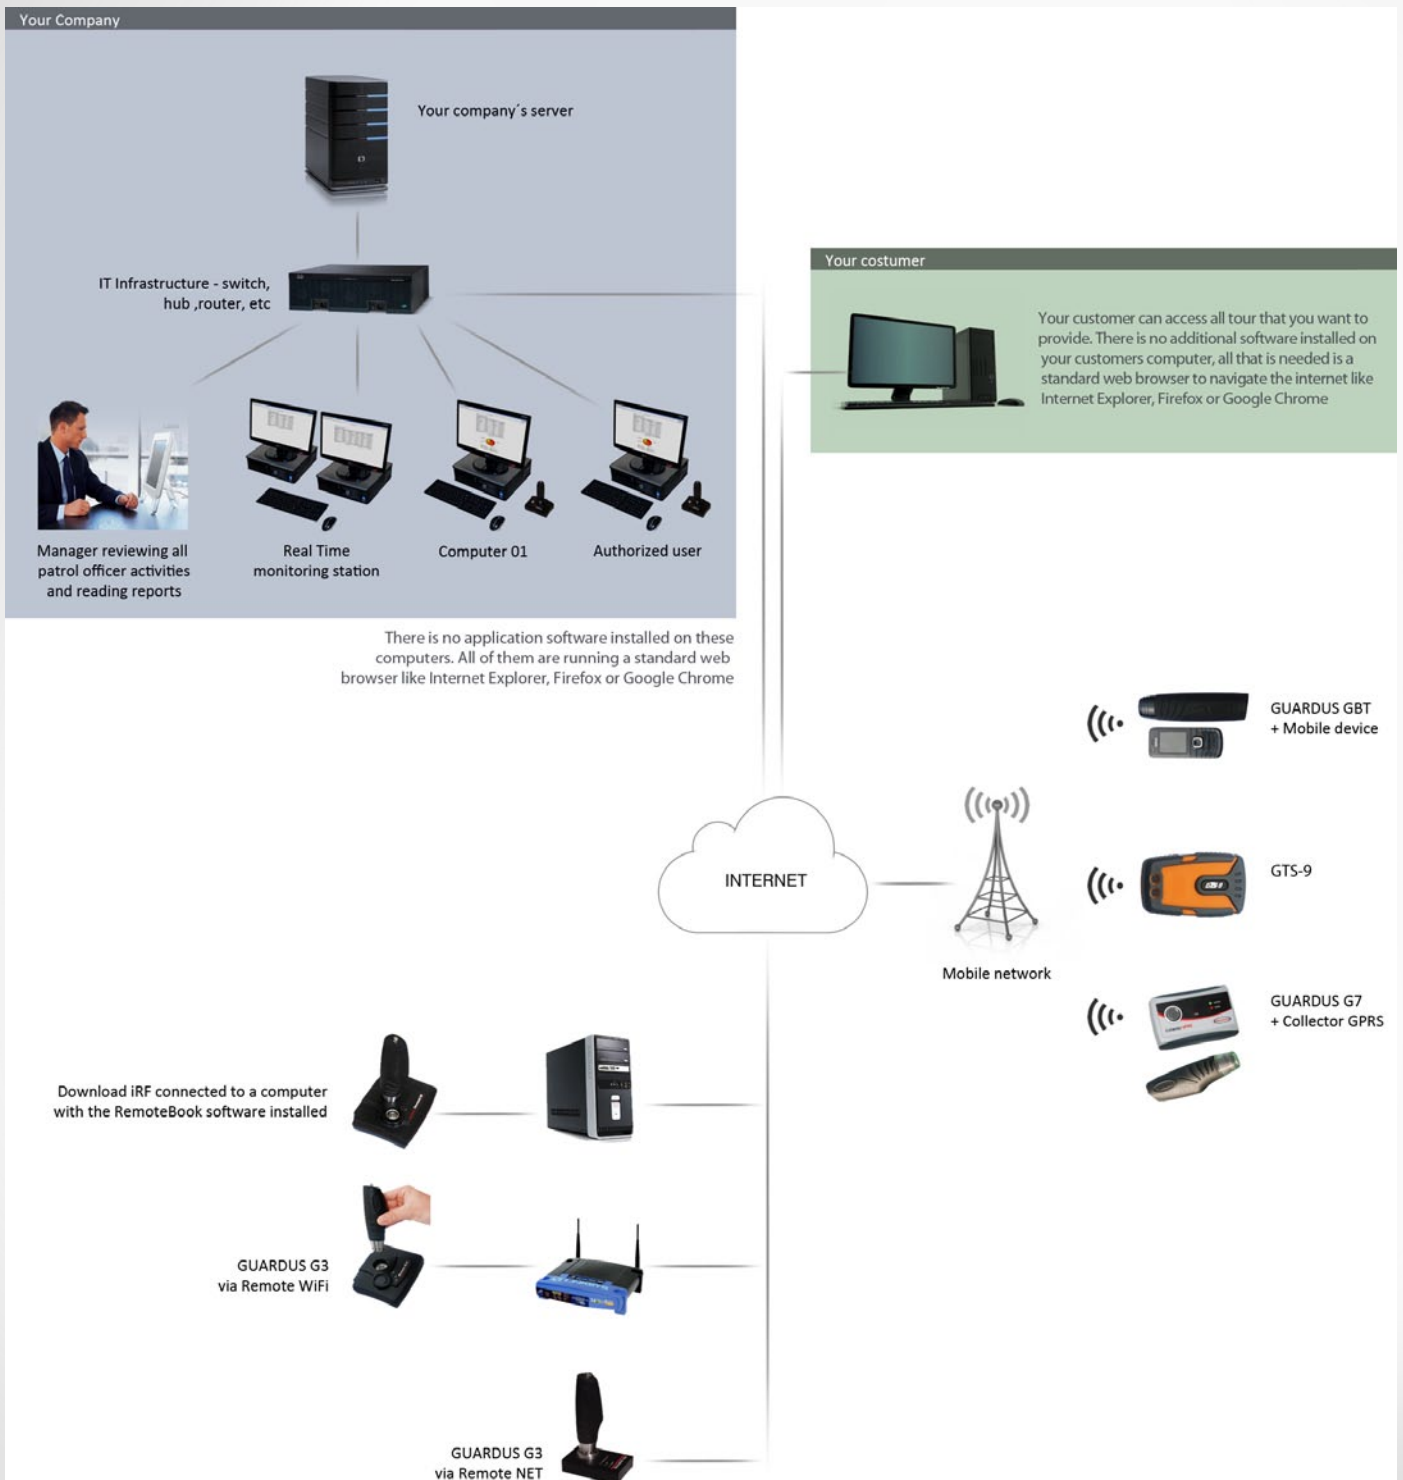

Guard On-Line Desktop is installed and run on a single computer just as any other Windows® application software is - like PROGuard. In the case more than one user wants to run Guard On-Line Desktop at the same time, it should be installed on more than one computer. It's not recommended that two or more users share the same database.

Guard On-Line Enterprise:

The Enterprise version is to be installed and run on a dedicated server owned and kept by your company. Its recommended to run under Windows® Server 2008 or higher, but in some special cases it can be installed in Windows® 7 or XP. Guard On-Line Enterprise has a WEB based interface so users access it through a standard internet browser. The Enterprise version is especially recommended for large and medium size companies.

Guard On-Line WEB:

No additional software needs to be installed in your company - all you need it is an internet connection and a browser. Contronics is responsible for all Information Technology infrastructure necessary for keeping it running 24/7. It includes servers, routers, air conditioning, UPS, power generator, backups, etc.

Guard On-Line WEB adheres to the SAAS (Software As A Service) concept. As Contronics takes care of all technical details, you can stay focused on your business.

Guard On-Line WEB is a broad spectrum tour verification system: It is recommended from small companies to large and worldwide corporations.
